

### What does enterprise look like?

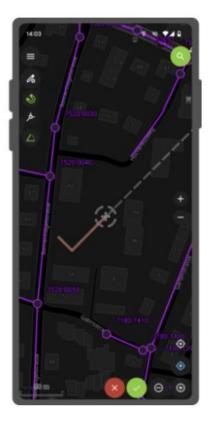

- A central repository of data
- ETL
- Web clients
- Desktop clients
- API WFS / WMS for third party applications
- Authentication
- Audit / paper trail
- Maintenance costs
- and now mobile data capture

## QField / QFieldCloud

- QField App
- QFieldCloud
- History 2011 first commit as "Quantum GIS for Android"
- QField 2 week release cycle
- 250k monthly users
- QFieldCloud Sync Plugin
- QFieldCloud SDK

### **Benefits**

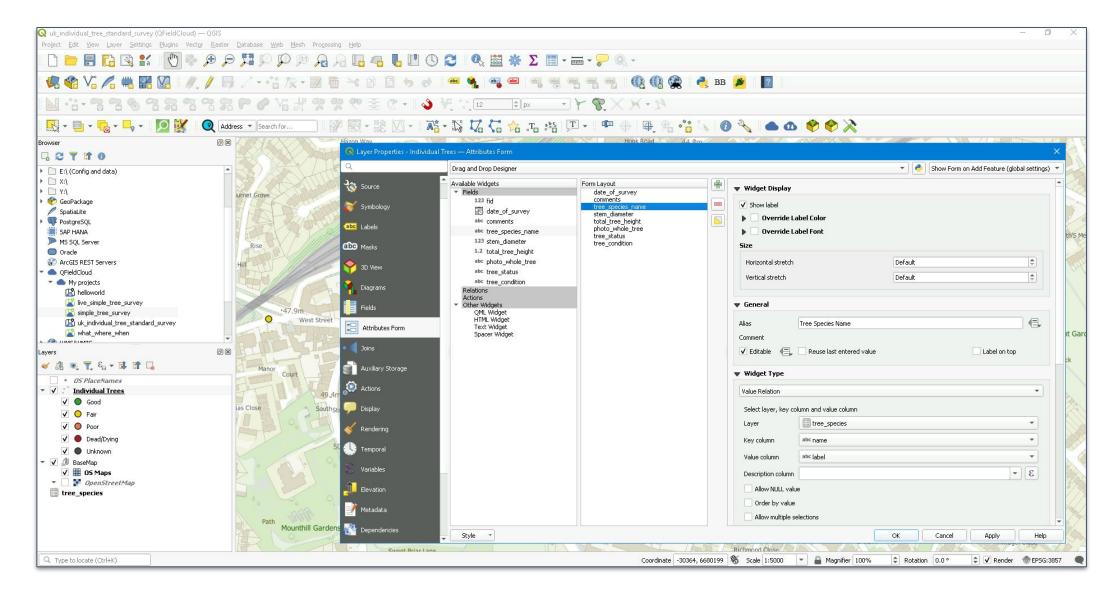

- QField == QGIS
- Offline Editing
- Multiple Users
- Teams / Roles
- Customisable Forms
- Audit Trail
- High Precision GPS
- Tracking
- Plugins
- Layout / Atlas PDFs

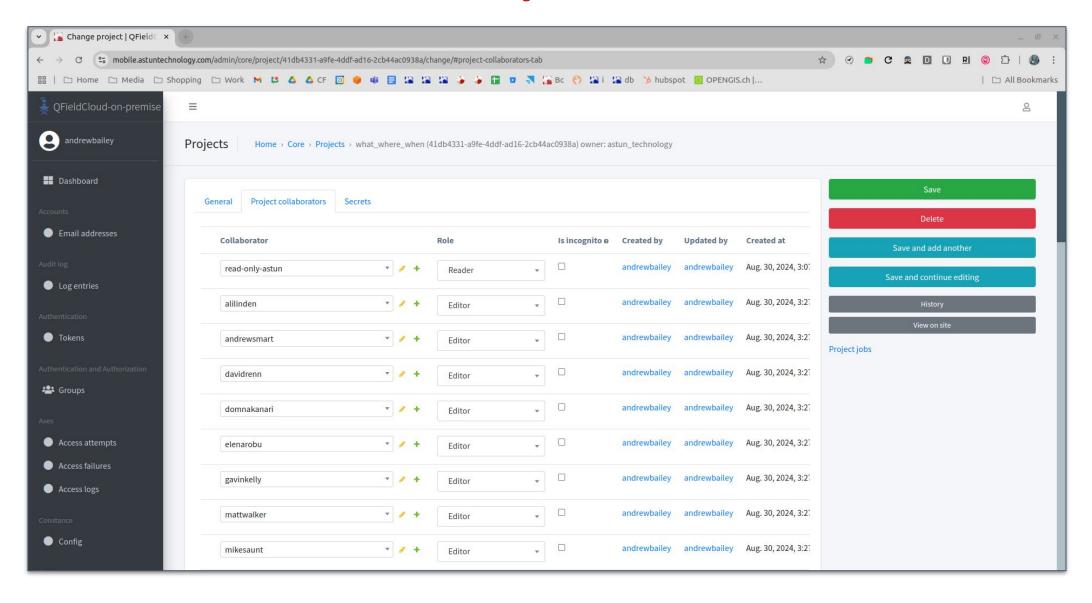

## QField starts with a project in QGIS

EXPERTS IN PLACE astuntechnology.com

### Invite collaborators & set permissions

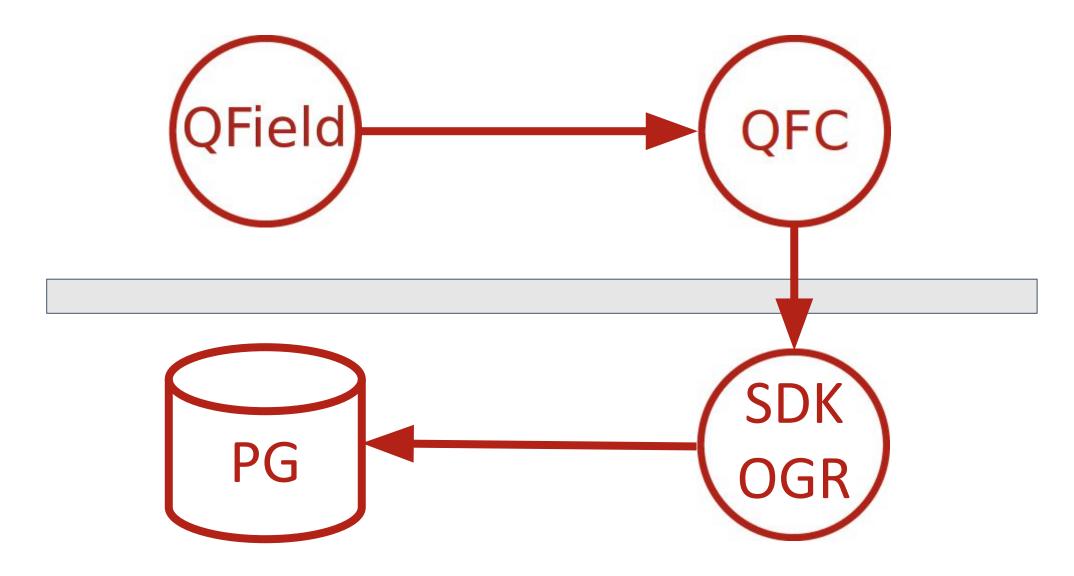

EXPERTS IN PLACE astuntechnology.com

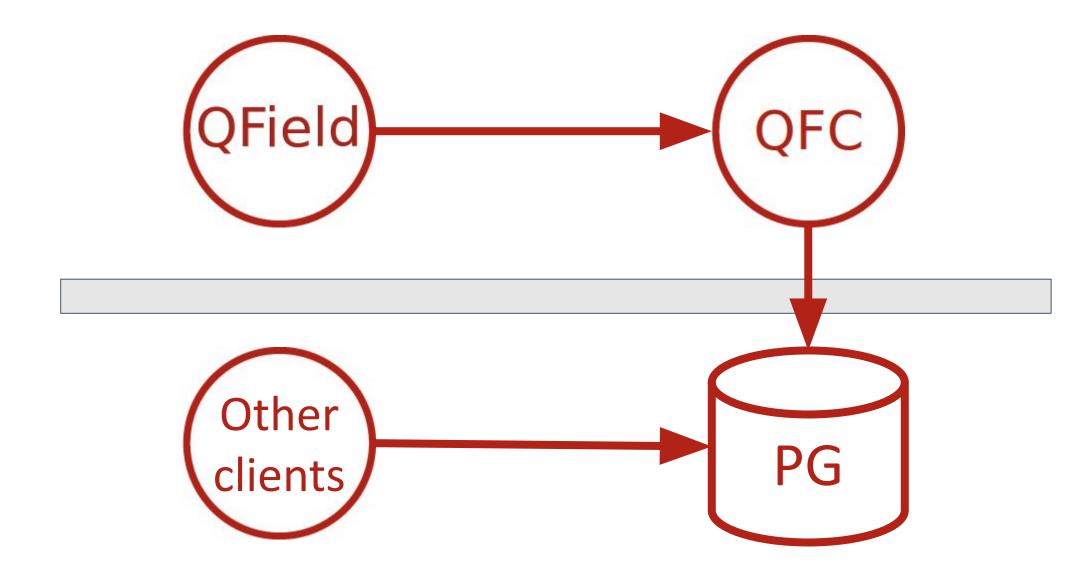

# Warning: 5 diagrams that all look very similar...

... I can only apologise

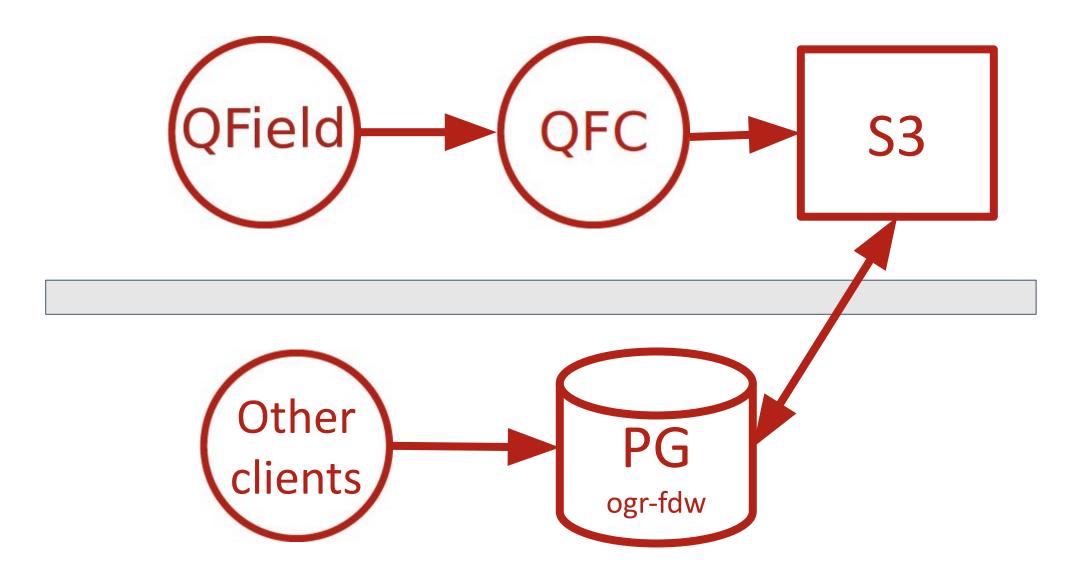

## 1: Geopackage to PostGIS

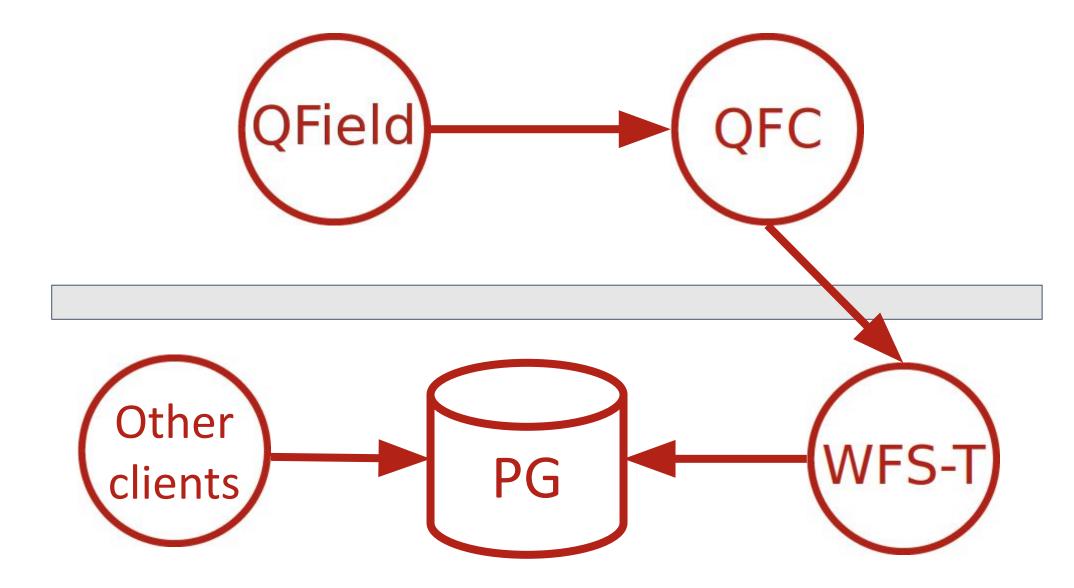

### 2: PostGIS

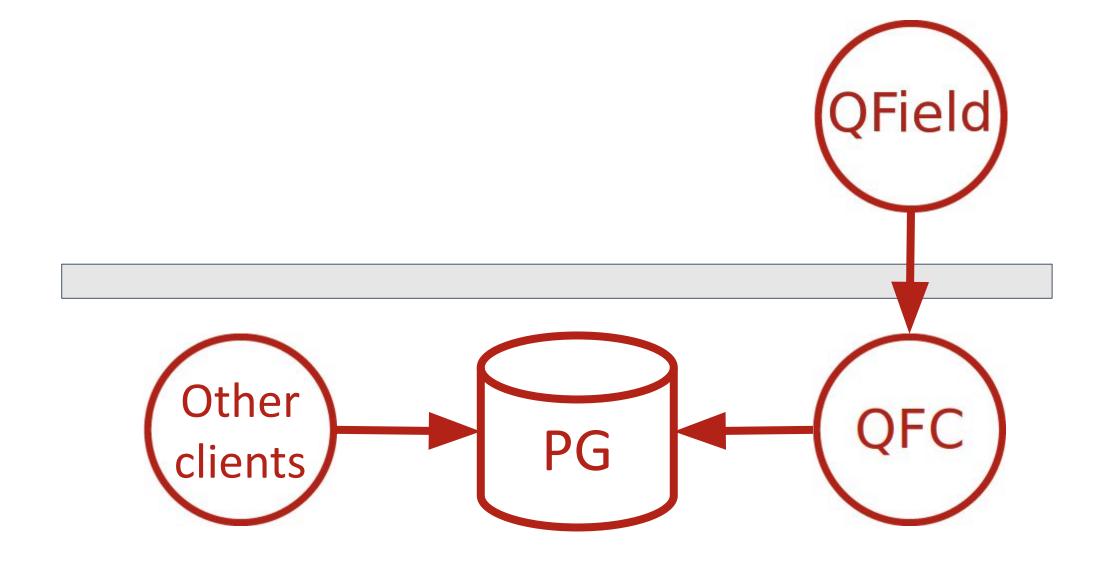

# 3: Geopackage & PostGIS FDW

### **4: WFS**

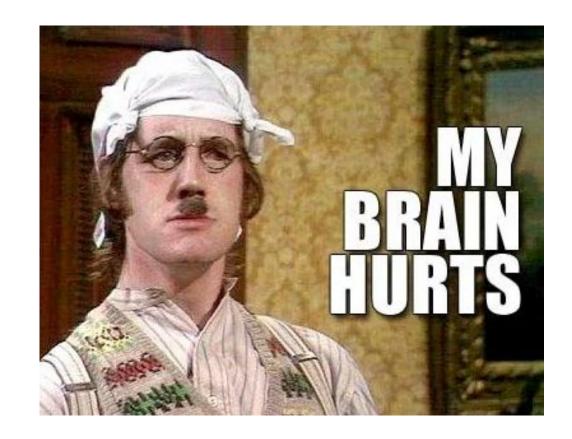

## 5: Self-hosted QFieldCloud

#### What? Which one?

- Do you need editing both ways?
- Consider the data risks
- If you can self host QFC
- If you can self host & pay for support
- If you can't & strict devops or need multiple enterprises try S3
- Or fund offline WFS-T

# **Auditing**

- Deltas in QFC
- @cloud\_username / @cloud\_useremail
- WFS / PG roles
- PGAudit extension / Geodiff
