

Creating a grid layout plugin for QGIS

Alexei Schwab

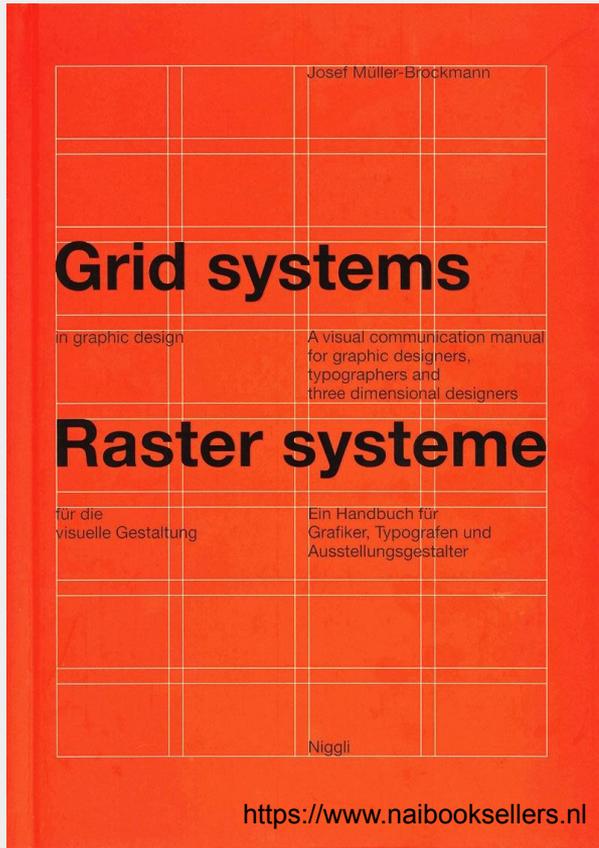

FOSS4GUK Bristol

12 November 2024

Background

- Do lots of training on QGIS
- How to help people make good-looking layouts with minimal effort?
- Good use of space, balance, alignment

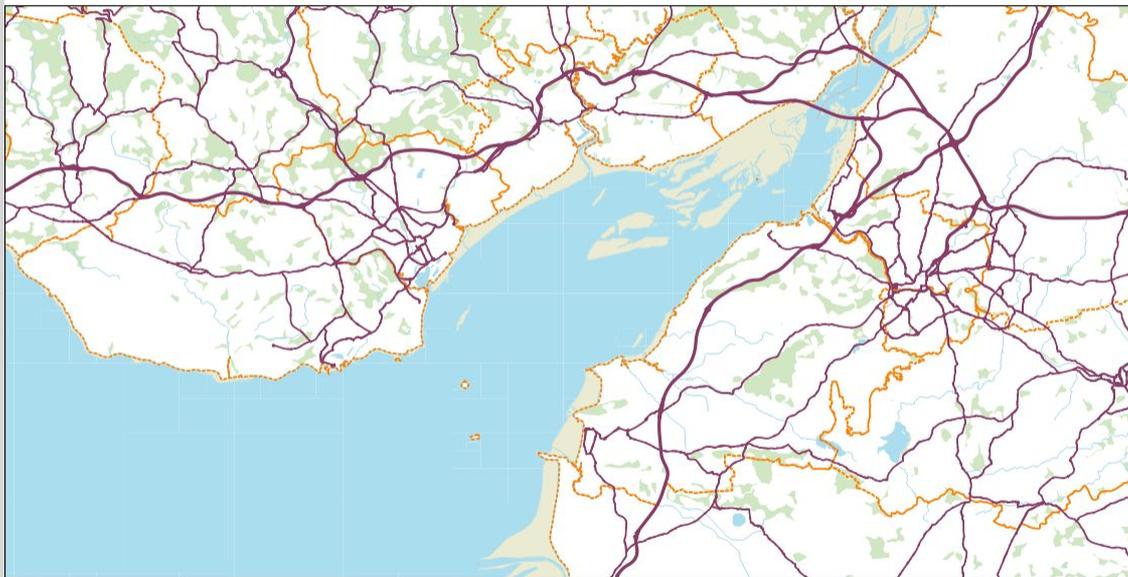

Grid systems to structure layout

Local authorities around the Severn Estuary

Production date:
11/11/2024

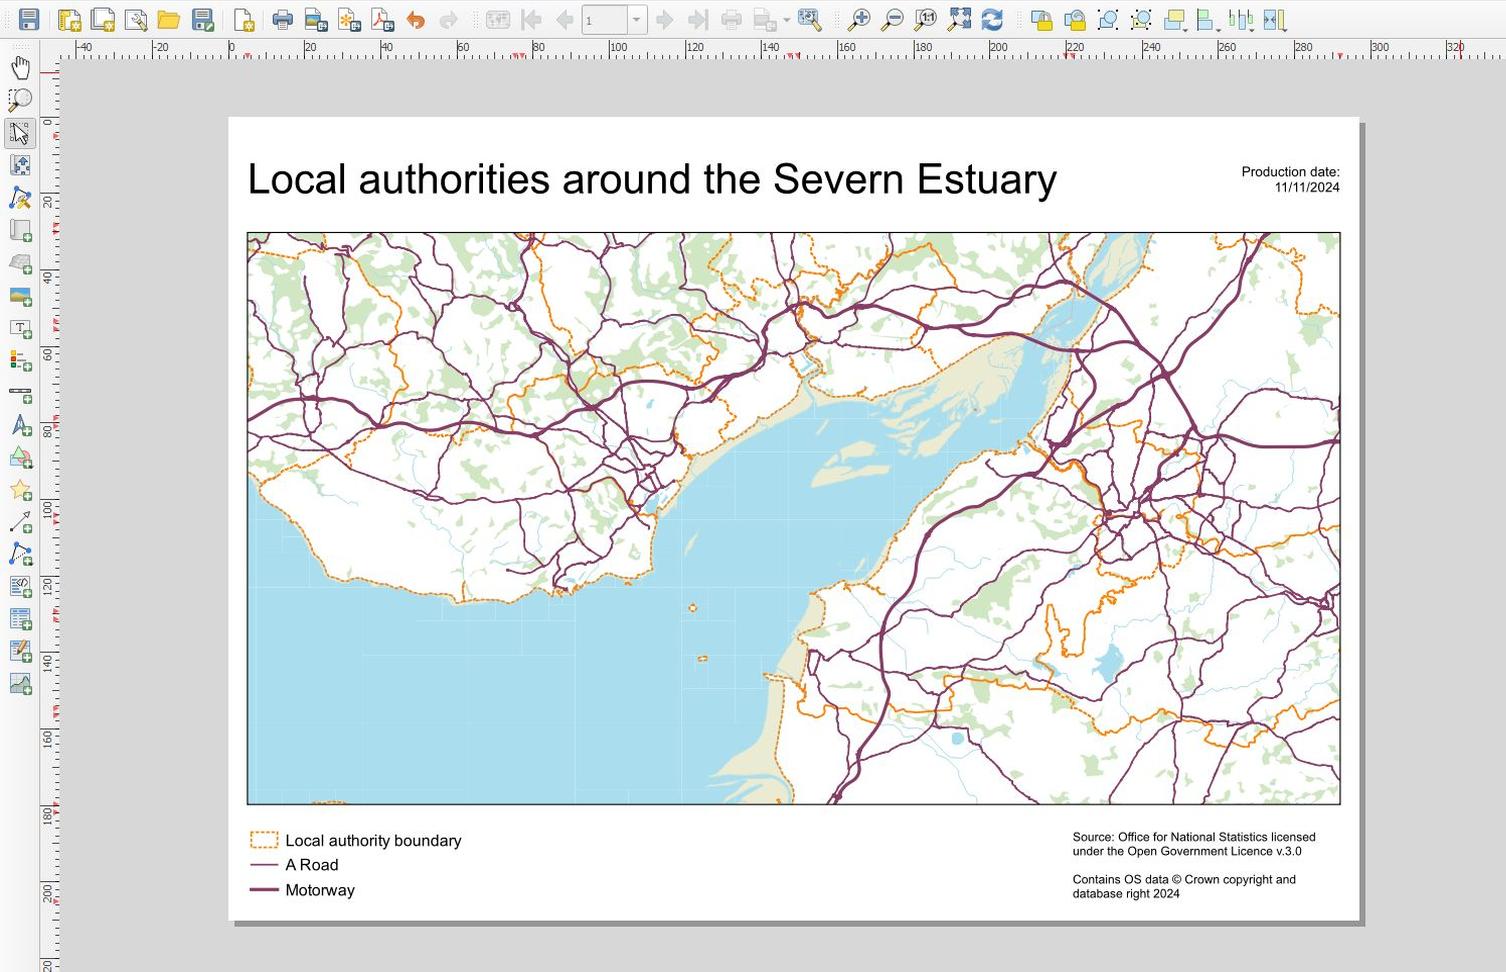

- Local authority boundary
- A Road
- Motorway

Source: Office for National Statistics licensed under the Open Government Licence v.3.0

QGIS

- You can add grids in QGIS' layout editor, but ...
- Adding in lots of grid lines is painful
 - Need 24 guides to make a 4 x 8 grid with gutters and margins
- Editing them is even more painful!
 - Not ergonomic to work with long lists of entries
- Have to do lots of calculations to get the right measurements to use
 - And hope you don't make any mistakes

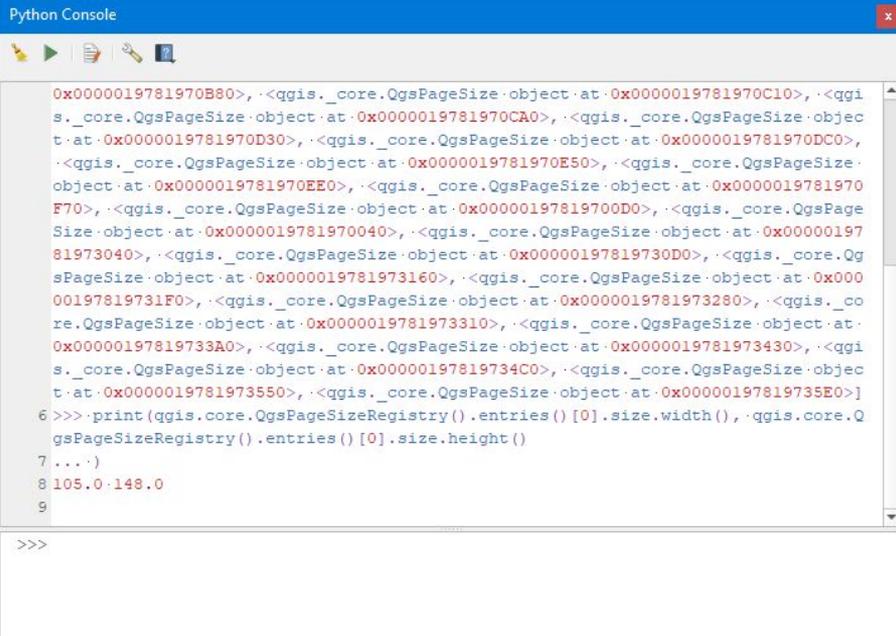

The plugin

Getting started

- Prototype in Python (basic calculations)
- Prototype in QGIS Python interface (QGIS interface interactions)
- Add to QGIS Plugin template
- Test, test, test

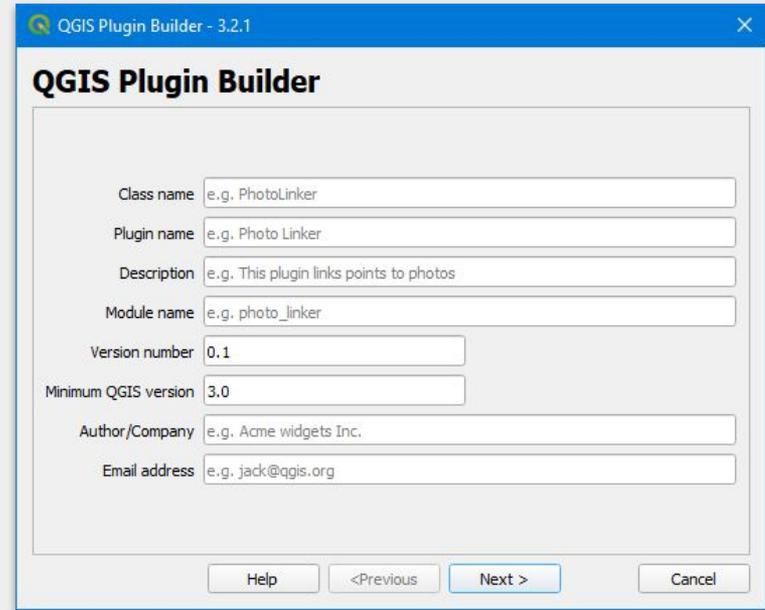

```
Python Console
0x0000019781970B80>, <Qgis._core.QgsPageSize object at 0x0000019781970C10>, <Qgis._core.QgsPageSize object at 0x0000019781970CA0>, <Qgis._core.QgsPageSize object at 0x0000019781970D30>, <Qgis._core.QgsPageSize object at 0x0000019781970DC0>, <Qgis._core.QgsPageSize object at 0x0000019781970E50>, <Qgis._core.QgsPageSize object at 0x0000019781970EE0>, <Qgis._core.QgsPageSize object at 0x0000019781970F70>, <Qgis._core.QgsPageSize object at 0x0000019781970D0>, <Qgis._core.QgsPageSize object at 0x0000019781970040>, <Qgis._core.QgsPageSize object at 0x0000019781973040>, <Qgis._core.QgsPageSize object at 0x00000197819730D0>, <Qgis._core.QgsPageSize object at 0x0000019781973160>, <Qgis._core.QgsPageSize object at 0x00000197819731F0>, <Qgis._core.QgsPageSize object at 0x0000019781973280>, <Qgis._core.QgsPageSize object at 0x0000019781973310>, <Qgis._core.QgsPageSize object at 0x00000197819733A0>, <Qgis._core.QgsPageSize object at 0x0000019781973430>, <Qgis._core.QgsPageSize object at 0x00000197819734C0>, <Qgis._core.QgsPageSize object at 0x0000019781973550>, <Qgis._core.QgsPageSize object at 0x00000197819735E0>]
6 >>> print(qgis.core.QgsPageSizeRegistry().entries()[0].size.width(), qgis.core.QgsPageSizeRegistry().entries()[0].size.height())
7 ...
8 105.0 148.0
9
>>>
```

```
column_width = (page_width - margin_left - margin_right - (gutter * (num_columns - 1))) / num_columns
row_height = (page_height - margin_top - margin_bottom - (gutter * (num_rows - 1))) / num_rows
vertical_guides = list(range_alternate_steps(margin_left, (page_width - margin_right), (column_width, gutter)))
vertical_guides.append(vertical_guides[-1]+column_width)
horizontal_guides = list(range_alternate_steps(margin_top, (page_height - margin_bottom), (row_height, gutter)))
horizontal_guides.append(horizontal_guides[-1]+row_height)
```

Building the plugin

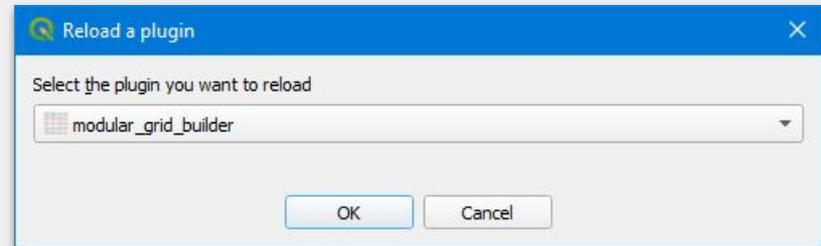

- Plugin template / Plugin Builder 3
 - Walks through key metadata
 - Exports an empty template to fill in
- Plugin Reloader plugin
 - Lets you reload the plugin quickly without needing to reinstall the plugin

The screenshot shows the 'QGIS Plugin Builder - 3.2.1' dialog box. It contains several input fields for plugin metadata:

Field	Example Value
Class name	e.g. PhotoLinker
Plugin name	e.g. Photo Linker
Description	e.g. This plugin links points to photos
Module name	e.g. photo_linker
Version number	0.1
Minimum QGIS version	3.0
Author/Company	e.g. Acme widgets Inc.
Email address	e.g. jack@qgis.org

At the bottom of the dialog, there are four buttons: 'Help', '<Previous', 'Next >', and 'Cancel'.

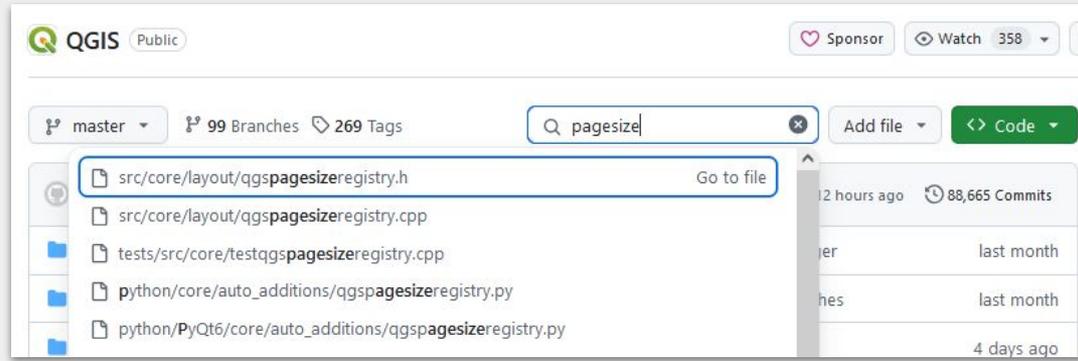

The screenshot shows the 'Reload a plugin' dialog box. It prompts the user to 'Select the plugin you want to reload' and features a dropdown menu with the following options:

Plugin Name
modular_grid_builder

At the bottom of the dialog, there are two buttons: 'OK' and 'Cancel'.

23 //
24
25 QgsPageSizeRegistry::QgsPageSizeRegistry()
26 {
27     add( QgsPageSize( QStringLiteral( "A6" ), QgsLayoutSize( 105, 148 ), QObject::tr( "A6" ) ) );
28     add( QgsPageSize( QStringLiteral( "A5" ), QgsLayoutSize( 148, 210 ), QObject::tr( "A5" ) ) );
29     add( QgsPageSize( QStringLiteral( "A4" ), QgsLayoutSize( 210, 297 ), QObject::tr( "A4" ) ) );
30     add( QgsPageSize( QStringLiteral( "A3" ), QgsLayoutSize( 297, 420 ), QObject::tr( "A3" ) ) );
31     add( QgsPageSize( QStringLiteral( "A2" ), QgsLayoutSize( 420, 594 ), QObject::tr( "A2" ) ) );
```

Publishing

- Adding to GitHub
- Creating metadata and documentation
- Submitting to QGIS Plugin Repository

Links:

- GitHub
https://github.com/ioalexey/modular_grid_builder
- QGIS plugin
https://plugins.qgis.org/plugins/modular_grid_builder

Gotchas

- Difference between using Python interface inside QGIS and standalone script
- Plugin structure
- How PyQt links to Python code
- Python API and QGIS data structures

... mostly resolved through trial and error!

Next steps

- Address the bugs on GitHub!
- Add new functionality: preview, grid templates
- Submit feature requests to improve grids in QGIS
- Make more plugins!
